Summary

Full Stack Developer skilled in MERN stack, Next.js, Golang, Kubernetes, and scalable backend systems. Experienced in building AI-powered applications, microservices, and cloud-native architectures. Strong understanding of REST APIs, authentication, system design, Docker, CI/CD, and distributed systems. Seeking a Software Engineer role to build scalable and intelligent products.

Education

Madan Mohan Malaviya University of Technology, Gorakhpur

B.Tech in Electronics & Communication Engineering

2022 – 2026

CGPA: 7.67/10

Experience

Software Development Engineer (Backend) — EVA Bharat

Apr 2026 – Present

On Site

- Working on EVA product backend systems and scalable microservice architecture using Golang.
- Developing REST APIs, event-driven services, and cloud-native backend solutions for production systems.
- Working with Docker, Kubernetes, CI/CD pipelines, and AWS-based infrastructure deployments.
- Collaborating with engineering teams to optimize backend performance, scalability, and service reliability.

Full Stack Developer — Qlink

Jan 2026 – Apr 2026

Remote

- Built AI-powered chatbot and full-stack web applications using MERN stack and Next.js.
- Integrated LLM APIs, vector databases, and semantic search systems for intelligent user interactions.
- Developed scalable backend services with secure authentication and optimized database queries.
- Managed deployments using Docker, CI/CD pipelines, Linux servers, and cloud infrastructure.

Projects

EndorsePro Platform | MERN Stack, JWT, VPS, CI/CD, Payment Gateway

Live | Code

- Built a full-stack endorsement and assessment platform where users can complete assessments and receive digital endorsement cards.
- Implemented secure authentication, payment gateway integration, and role-based workflows for users and companies.
- Developed features allowing companies to discover endorsed candidates and directly connect with them through the platform.
- Deployed production application on Linux VPS using Docker and automated CI/CD pipelines for scalable production releases.

Digital Library Platform | Next.js, MongoDB, JWT, Tailwind CSS, Linux VPS, CI/CD

Live | Code

- Built and deployed a scalable full-stack digital library platform supporting 1,000+ digital resources.
- Implemented JWT authentication and role-based access control to secure premium content access.
- Deployed on Linux VPS with Docker and automated CI/CD pipelines for reliable production releases.

Technical Skills

Languages: C, C++, JavaScript, Python, Golang

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Bootstrap, Material-UI, shadcn/ui

Backend: Node.js, Express.js, Golang, FastAPI, REST APIs, JWT, OAuth

Core CS: Data Structures, Algorithms, Object-Oriented Programming (OOPs), DBMS, Operating Systems

Database: MongoDB, PostgreSQL, MySQL

DevOps & Cloud: Docker, Kubernetes, CI/CD, Linux VPS, AWS, DigitalOcean, Vercel

AI & Systems: LLM APIs, Vector Databases, Semantic Search, Agentic AI Systems, Microservices

Tools: Git, GitHub, Postman, VS Code

Achievements

- Solved 600+ Data Structures and Algorithms problems across LeetCode, CodeChef and Codeforces platforms.
- Built and deployed production-grade AI chatbot systems using LLM APIs and vector search architecture.
- Deployed multiple full-stack applications on Linux VPS using Docker, Kubernetes, and CI/CD pipelines.
